the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.3 billion (UNEP 2000). The population of the world is projected to increase to 6.5 billion by the year 2050 (UNEP 2000).

As the world's population grows, the demand for water increases. The amount of water available to each person is decreasing. The amount of water available to each person is decreasing.
